Piombino, a small, scenic port town in Tuscany, Italy, is preparing for a robot invasion this week. More than 40 robots and 150 scientists and engineers are gathering here to compete in the [euRathlon 2015 Grand Challenge](#). Inspired by the [2011 Fukushima accident](#), the euRathlon is a unique multi-domain (land, air, and sea) robotics competition that will feature teams from 21 countries and test their cooperative robotic systems in complex, realistic tasks as part of a simulated emergency-response operation.
